Dear Reader,

We started our journey of analysing legislative big-data in the European Parliament last year with the release of our first annual report. Encouraged by its favourable reception and increased interest in our work since its publication, we are now proud to present its third issue, the Eulytix Annual Report, European Parliament 2021-2022.

This report serves a threefold purpose and has multiple applications. First, it gives all EU citizens an overview on the legislative activities of the Members of the European Parliament (MEPs). Second, our report helps lobbyist and public affairs companies improve their lobbying and communication strategies by identifying key MEPs in a certain EP Group or policy area. Third, it gives MEPs, national delegations, and EP Groups new avenues to enhance their legislative influence by analysing their legislative performance as well as the performance of their political allies and opponents.

The report is based on the legislative amendments tabled by the MEPs in the various committees during the second year of the current EP term, from 2021 September to 2022 August. This report is the product of the analysis of hundreds of thousands of data points on the legislative processes in the EP with the use of techniques from social network analysis.

In this report MEPs are ranked along three principal dimensions: the activity ranking consists of the most active MEPs, the connectivity ranking highlights the most embedded MEPs, and the ideological heterogeneity ranking reveals the capacities of certain MEPs to act as bridges between different segments of the ideological spectrum. Since last year, we have further developed our methodology, in part responding to feedback from last year.

Similar to last year's report, we present the legislative activities of individual MEPs by EP Committee, EP Group and Member State. The report thus contains 5 main chapters. First, we briefly introduce the underlying methodology in Chapter 1. Then, Chapter 2 presents the top 50 MEPs regarding each dimension. The following Chapter 3, 4 and 5 contain the results by EP Committee, EP Group and Member State, respectively.

If you are interested in our work or need more detailed analysis or insights, do not hesitate to contact us. We are happy to provide you with EU-related content or to partake in joint academic research.

We wish you an enjoyable reading.

Attila Kovács, PhD.

1. Data & methodology

This chapter serves the purpose of elaborating the methodological foundations of the rankings published in this report. First, the input dataset is introduced. Then, we outline the methodological principles of the various rankings: activity, connectivity, and ideological heterogeneity.

Unlike most similar reports on the European Parliament, this work relies on the cosponsorship network of the 9th Parliament of the European Union (EP). We use a database of amendments tabled in the EP containing several variables such as the title of the legislative dossier amended, the procedure during which the amendment was tabled etc. The amendments in the dataset are extracted from the relevant documents in the EP's web archives.

We connect Members of the EP (MEPs) based on their mutual sponsorship of legislative amendments. By construction, the strength of the ties between depends on the number of total amendments tabled. It is known intuitively that stronger bonds might form during an activity if the number of participants is low, hence we also consider the number of MEPs participating in the tabling of each amendment. The more sponsors an amendment has, the less its contribution to the social ties between the MEPs involved. The result is network that not only represents the existence of ties between MEPs, but also their strength.

We construct a measure of MEPs' legislative activity based on the number of amendments they tabled during legislative procedures. The result is such a quantity, which captures the legislative activities of MEPs. We then rank MEPs along this dimension, in various thematic sections such as Member States, EP Groups or EP Committees.

The connectivity i.e., centrality of an MEP in the network is also investigated. We employ a multi-dimensional approach to assess MEPs' importance in the legislative arena. The dimensions along which MEPs' "connectedness" is investigated are the number and strength of their connections, the number of MEPs they can reach and the average distance to them and finally, the well connectedness of their direct partners. A partial ranking along each of these dimensions is created then aggregated using the Kemény-Young method, treating each dimension with equal weight, establishing the conclusive hierarchy of MEPs regarding their well-connectedness.

As the ideological heterogeneity of one's legislative partners is often thought of as a measure of readiness to compromise – an important factor in coalition building – we also investigate the openness of MEPs to form ties with ideologically different partners. The first dimension considered in this regard is the ideological diversity of MEPs' partners measured as the average absolute ideological distance between MEPs and their connections. The ideological distance between MEPs is measured as the distance between them on the plane set by the traditional left – right and pro-EU – anti-EU scales. The ideological features of MEPs are assumed to be the same as their national parties', which were obtained from the results of the 2019 Chapel Hill Expert Survey. The second dimension incorporates the number of colleagues from other political groups an MEP can reach, and their average distance to them. The last one counts in how many cases does an MEP lie on the shortest path between fellows from their EP group and colleagues from other EP groups. This dimension highlights MEPs that act as bridges to EP groups other than their own. The final ranking of MEPs regarding their ideological heterogeneity is created using the same preference aggregation method as outlined in the case of connectivity.

The final, comprehensive ranking of MEPs is created by taking into account each ranking, activity, connectivity and ideological heterogeneity, assigning equal importance to them.

2. The top 50 MEPs

The top 50 MEPs: Overall

Rank	Name	EP Group	Member State

Key Findings

In the third year of the 9th European Parliament 57 distinct MEPs from 20 Member States sponsored 1319 amendments in the AFCO Committee. Out of these amendments, 422 were cosponsored by two or more MEPs.

The most active MEP in the Committee was Domènec Ruiz Devesa (S&D, Spain), who sponsored 123 amendments with a total of 12 cosponsoring partners.

The most amended dossier of the Committee was "Election of the Members of the European Parliament by direct universal suffrage" (2020/2220 (INL)), followed by "Statute and funding of European

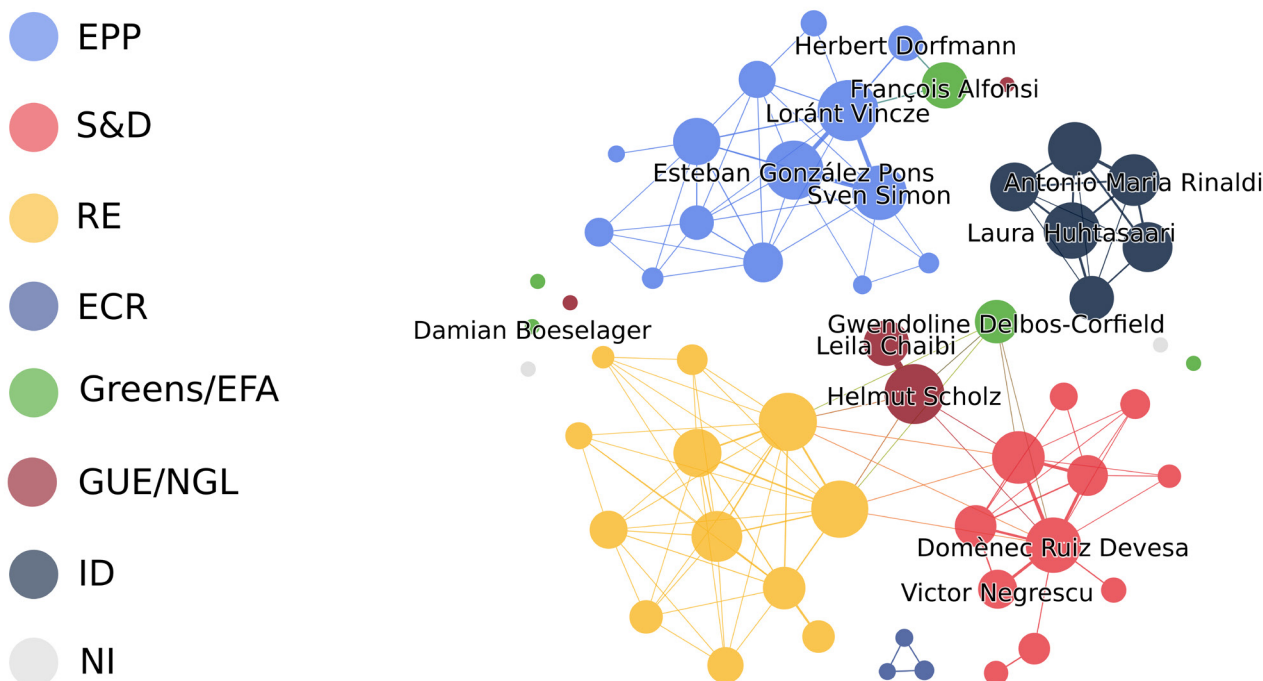

political parties and foundations" (2021/0375 (COD)).

The most connected MEP was Loránt Vincze (EPP, Romania), who sponsored 112 amendments with 9 partners.

The most heterogeneous MEP was François Alfonsi (Greens/EFA, France), with 58 amendments and 2 cosponsoring partners.

The most active and most heterogeneous coordinator was Domènec Ruiz Devesa (S&D, Spain), while the most connected was Sven Simon (EPP, Germany).

Key Findings

In the third year of the 9th European Parliament 199 distinct MEPs from 26 Member States sponsored 8444 amendments in the AFET Committee. Out of these amendments, 3337 were cosponsored by two or more MEPs.

The most active and most connected MEP in the Committee was Petras Auštrevičius (RE, Lithuania), who sponsored 828 amendments with a total of 47 cosponsoring partners.

The most amended dossier of the Committee was "Implementation of the common security and defence policy - annual report 2021" (2021/2183 (INI)), followed by "2021 Commission Report on

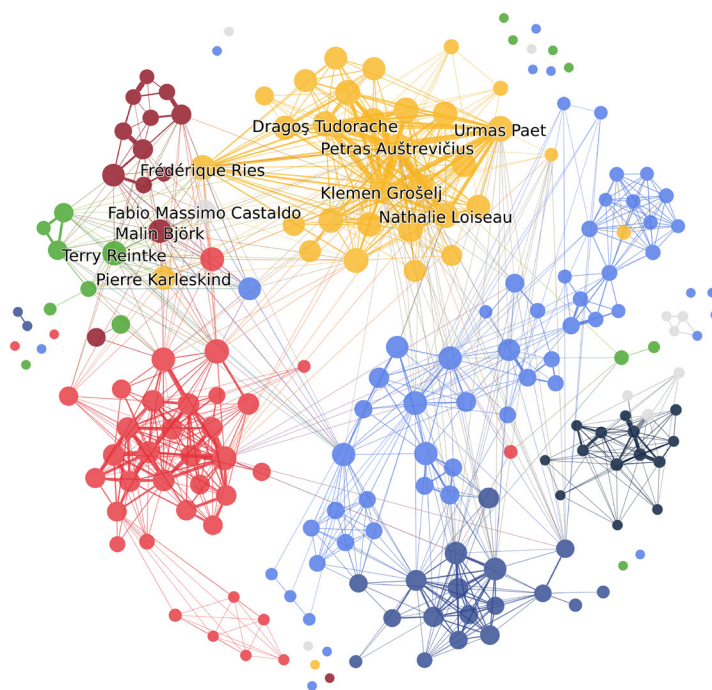

Turkey" (2021/2250 (INI)).

The most heterogeneous MEP was Terry Reintke (Greens/EFA, Germany), with 31 amendments and 19 cosponsoring partners.

The most active coordinator was Tonino Picula (S&D, Croatia), the most connected was Hilde Vautmans (RE, Belgium), and the most ideologically heterogeneous was Michael Gahler (EPP, Germany).

Key Findings

In the third year of the 9th European Parliament 85 distinct MEPs from 24 Member States sponsored 3312 amendments in the INTA Committee. Out of these amendments, 1807 were cosponsored by two or more MEPs.

The most active MEP in the Committee was Inma Rodríguez-Piñero (S&D, Spain), who sponsored 356 amendments with a total of 14 cosponsoring partners.

The most amended dossier of the Committee was "Regulation on

distortive foreign subsidies" (2021/0114 (COD)), followed by "Carbon Border Adjustment Mechanism" (2021/0214 (COD)).

The most connected MEP was Gabriel Mato (EPP, Spain), who sponsored 326 amendments with 23 partners.

The most heterogeneous MEP was Helmut Scholz (GUE/NGL, Germany), with 197 amendments and 6 cosponsoring partners.

The most active coordinator was Inma Rodríguez-Piñero (S&D, Spain), the most connected was Christophe Hansen (EPP, Luxembourg), and the most ideologically heterogeneous was Geert Bourgeois (ECR, Belgium).

Key Findings

In the third year of the 9th European Parliament 63 unique MEPs from the European Conservatives and Reformists (ECR), from 14 Member States sponsored 10043 amendments. Out of these amendments, 2973 were cosponsored by two or more MEPs.

The most frequent cosponsoring partner of the ECR was ID, followed by EPP.

On the list of most active EP Groups, ECR takes the 7th position. The most active MEP of the group was Margarita de la Pisa Carrión, who sponsored 1228 amendments with a total of 12 cosponsoring partners.

The most amended dossier of ECR Group was "Batteries and waste batteries" (2020/0353 (COD)), followed by "Asylum and migration management" (2020/0279 (COD)).

On the list of the most connected EP Groups, the ECR Group takes the 5th position. The most connected and most heterogeneous MEP of the Group was Andrey Slabakov, who sponsored 320 amendments with 46 partners.

Members of ECR Group were most active in the ENVI Committee, followed by LIBE and ITRE.

The most active, connected and heterogeneous national delegation was Slovakia.

On average, ECR was the 5th top political group.

Key Findings

During the third year of the European Parliament's 9th term, 21 MEPs from Sweden tabled 8182 amendments. Out of these amendments, 5712 were cosponsored by two or more MEPs.

Sweden takes the 9th position on the list of most active Member States.

MEPs from Sweden were the most active in the LIBE, ENVI and ITRE Committees.

Swedish MEPs tabled the most amendments to the dossier titled "Asylum and migration management" (2020/0279 (COD)).

Sweden was the 10th most connected Member State in the investigated period.

The most active and most connected Swedish MEP in the third year of the current EP term was Jörgen Warborn (EPP), who tabled 1197 amendments and worked together with 73 distinct cosponsoring partners.

Sweden ranked 10th with regard to ideological heterogeneity.

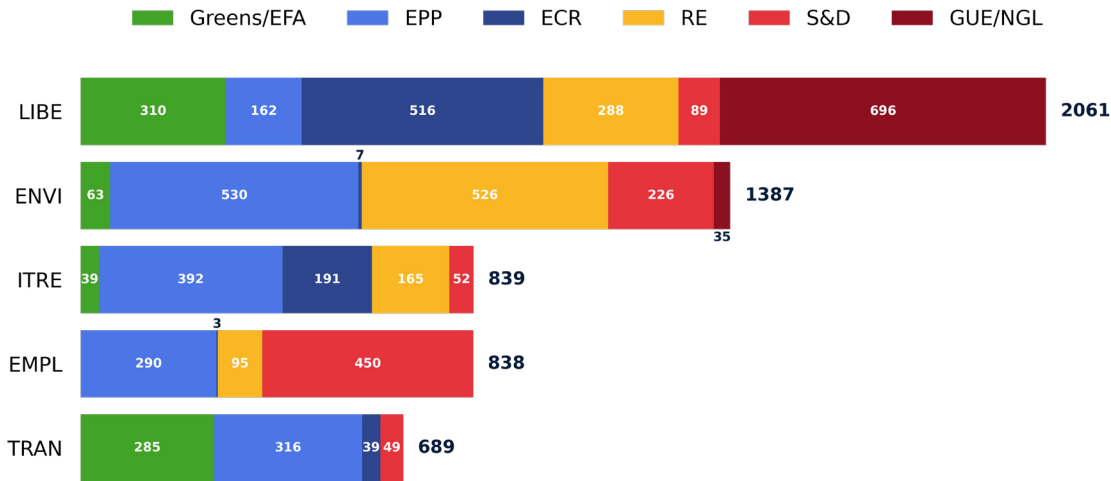

The most heterogeneous Swedish MEP was Alice Kuhnke (Greens/EFA) with 355 amendments and 24 cosponsoring partners.

Overall Sweden was the 11th top ranked Member State.

Most amended dossiers

Procedure	Title	Number of amendments
1. 2020/0279 (COD)	Asylum and migration management	714
2. 2020/0353 (COD)	Batteries and waste batteries	481
3. 2021/0223 (COD)	Deployment of alternative fuels infrastructure	327
4. 2021/0211 (COD)	Revision of the EU Emissions Trading System	283
5. 2021/2186 (INI)	The situation of fundamental rights in the European Union in 2020 and 2021	277

In which EP Committees were the MEPs most active? (number of sponsorships)

Most significant Member State partners (total connection strength)

Member State	EPP	S&D	RE	ECR	GUE/NGL	Greens/EFA	ID	NI	Total
1. Germany	271,53	170,92	135,48	0,00	1,73	31,84	70,28	0,00	681,77
2. Spain	81,04	320,07	127,03	71,65	34,90	34,84	0,00	0,00	669,52
3. Netherlands	55,40	90,04	185,51	125,64	34,55	6,08	0,00	0,00	497,22
